

ADD 1.1 | Guided Notes: Going Digital & the Movie-Making Process

NAME _____

1. Today, anyone with a computer, a smartphone, and editing software can create a _____ -looking video — expensive equipment is no longer the barrier it once was.
2. The movie-making process has four phases, in order: _____, _____, _____, and _____.
3. **Preproduction** is everything from the initial idea to scriptwriting — a _____ lists every shot you'll need so nothing gets missed on shoot day.
4. During **Production**, follow the "three S's": _____, _____, and _____. A tripod helps with all three.
5. **Postproduction** is where footage becomes a finished film — the computer must _____ (combine clips, effects, and audio) into one playable file.
6. A video frame is made of _____ — the smallest single point of color information in an image.
7. Two videos can be the same resolution but a different _____ — the proportional relationship between a frame's width and height (16:9 vs. 9:16, for example).
8. The software that compresses a video for storage and playback, then decompresses it to play, is called a _____.

Discuss: Think of a video you've seen recently that felt professional. What do you think happened in each of its four production phases?
