

| *A page is never really blank — even empty space is a design decision.*

1. The blank space between a page's edge and its content is called the _____. The space between two columns of text, or between two facing pages, is called the _____.
2. A vertical division of a page used to organize content into readable widths is a _____. A page built from three of these side by side is called a **3-column grid**.
3. **Hierarchy** means ranking content by importance. List the four levels of text hierarchy in a typical layout, from most to least prominent:

4. Two facing pages designed to be viewed together as one visual unit are called a _____. The page number (and any repeating header/footer) printed on every page is called the _____.
5. Empty space in a layout is not wasted — it's called _____, and it gives content room to breathe.
6. Sketch a rough 3-column grid below, and label where you'd place a headline, a photo, a caption, and the margin/gutter.

Discuss: What makes a page layout easy to read? What makes one hard to read?
