

1. The **New Document** dialog asks for a preset category (Print, Web, Mobile, Film & Video...), size, units, orientation, and _____ mode (CMYK for print, RGB for screen).
2. An _____ is one page/canvas in your document — a single Illustrator file can hold multiple, which is perfect for a business card's front and back, or a set of related layouts.
3. The _____ is the gray work area surrounding your artboards — you can leave art there as scratch space, but it never prints or exports.

Label each zone below

- ☐ _____ — extra artwork past the trim edge, so no white sliver shows up if the physical cut shifts slightly.
- ☐ _____ — the actual final, physical edge of the printed piece (matches the artboard size).
- ☐ _____ — the safe zone for text/important content, kept clear of the trim edge in case of small cutting shifts.

Discuss: Why would skipping bleed cause a problem on a printed business card, even though it looks perfectly fine on screen?
