

Before

After: aligned + distributed

1. The **Align panel** can line objects up relative to each other, to a _____ object (click one twice to set it as the anchor), or to the whole artboard.
2. **Distribute** spaces objects out evenly — equal gaps between them, or equal center-to-center distance — instead of just lining up one edge.
3. Objects paint in a specific order called _____ order — the last one drawn sits on top. Use **Object > Arrange** (Bring to Front, Bring Forward, Send Backward, Send to Back) to change it.
4. Once a set of objects is arranged the way you want, _____ them (Cmd/Ctrl+G) so they move, scale, and rotate together as one unit.

Discuss: You've arranged five icons in a perfect row, but moving one accidentally un-aligns it. What should you have done first?
