

Auto Ducking • Enhance Speech • Loudness Auto-Match • Remix • Repair

1. _____ automatically improves dialogue clarity and reduces background noise.
2. The Essential Sound tool _____ automatically levels out inconsistent volume across multiple clips to a consistent target.
3. _____ automatically lowers music volume whenever dialogue is present.
4. _____ removes specific audio problems — hum, reverb, background noise — without a manual EQ pass.
5. _____ automatically adjusts a music track's length and arrangement to fit a target duration.

Discuss: Your mix sounds great through headphones but muddy on a phone speaker. What Essential Sound tool would you revisit first?
