

clipping • gain • levels • room tone • scratch track

1. The ambient sound of a space with no one talking, recorded for editing later, is called _____.
2. _____ is how loud or quiet an audio signal is; _____ controls how much a mic's signal is amplified.
3. _____ is distortion from pushing levels too high — a hard digital error, not a style.
4. A rough, temporary recording used as a placeholder before the final take is a _____.

Discuss: Halfway through your final take, you notice you've been clipping the whole time. What do you do — keep going, or stop and restart?
