

Effect Presets & Adjustment Layers Reference

ADD 6.1 · APPLICATIONS OF
DIGITAL DESIGN

NAME

DATE

adjustment layer • copy/paste attributes • effect preset • nesting

1. Create an adjustment layer, place above the whole sequence.
2. Apply an effect: it now affects every clip beneath it.
3. Copy attributes from one clip, paste onto others, adjust settings per clip.
4. Nest a multi-clip sequence to apply one effect to a whole group.

An adjustment layer doesn't touch your original clips.
Delete it, and your clips are exactly as they were.
