Drop Shadow

Effect > Stylize > Drop Shadow. Renders a soft, offset duplicate behind the object to fake a cast shadow. Adjust offset, blur, opacity, and color.

Feather

Effect > Stylize > Feather. Fades an object's hard edge into transparency over a set distance, without changing the actual path.

Inner Glow / Outer Glow

Effect > Stylize > Inner/Outer Glow. Adds a soft halo of light inside or radiating outward from an object's edge.

3D and Materials

Effect > 3D and Materials > Extrude & Bevel / Revolve. Builds a dimensional object from a flat path, with adjustable lighting and materials.

Expand Appearance

Object > Expand Appearance. Converts every effect on an object into permanent path geometry, do this last, since effects stop being editable afterward.

Every effect above stays listed, and editable, in the Appearance panel until you choose to expand it. Don't expand until you're sure you're done adjusting.
