

Check each box as you complete it. This site is yours for the rest of the year, every summative project gets published here.

1. **Create the site.** Go to `sites.google.com`, sign in with your school account, and click **Blank** to start a new site.
2. **Name your site.** Click the untitled text at the top left and enter a name. Use your real name so your teacher can find it, not a nickname.
3. **Find your logo slot.** Click the **gear icon (Settings)** in the top toolbar, then click **Brand images**. The **Logo** upload is at the top. Leave it empty for now, you'll add your real one in S2.
4. **Find your favicon slot.** In the same **Brand images** panel, find the **Favicon** upload below the logo. Leave it empty too, then close Settings.
5. **Create your About Me page.** Add a new page, title it "About Me," and write 5–7 sentences introducing yourself as a designer.
6. **Choose a theme.** Pick a starting color/font theme from the Themes tab. You can refine this later, don't overthink it today.
7. **Publish.** Click the purple **Publish** button, top right, then confirm.
8. **Copy your link.** Click the chain-link icon (Copy Published Site Link), not the address bar, and paste it below.

MY PUBLISHED SITE LINK

**Remember:** the logo and favicon slots you found today (Settings → Brand images) stay empty until S2, once your Geometric Logo project is actually designed and exported.
