

# 5.1 Guided Notes

## Type Anatomy & Classification

FDD UNIT 5 · DIGITAL  
COMMUNICATIONS

NAME \_\_\_\_\_

DATE \_\_\_\_\_

ascender • baseline • cap height • counter • descender • descender line • font  
• sans-serif • serif • typeface • x-height

**Label the 4 lines** using the word bank above.

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

1. A \_\_\_\_\_ is one weight/style/size within a type family. The family itself is called a \_\_\_\_\_.
2. The small line finishing off the end of a letter's main strokes is called a \_\_\_\_\_. A typeface without these is called \_\_\_\_\_.
3. The part of a lowercase letter extending above the x-height (like on a "b" or "h") is called an \_\_\_\_\_. The part extending below the baseline (like on a "p" or "g") is a \_\_\_\_\_.
4. The fully or partially enclosed space inside a letterform (like the hole in an "o") is called a \_\_\_\_\_.
5. List the 4 broad classifications discussed in class:  
\_\_\_\_\_

**Discuss:** Look at 3 typefaces on the handout your teacher provides. Which classification does each belong to, and how can you tell?
