

ADD 6.1 | Guided Notes: Effect Presets & Adjustment Layers

NAME _____

adjustment layer • copy/paste attributes • effect preset • nesting

1. An _____ is a saved combination of effects and settings, applied in one click and reusable.
2. An _____ is a transparent layer that applies its effects to everything beneath it in the stack, without touching the original clips.
3. _____ places an entire sequence inside another sequence as a single clip — useful for applying one effect to a whole group of clips at once.
4. _____ / _____ copies a clip's effects and settings, then pastes them onto other clips fast.

Discuss: You need to remove an effect from your entire sequence at once. Which approach from today makes that a one-step fix?
