

ease in/ease out • keyframe • opacity • spatial interpolation • temporal interpolation

1. A _____ sets a property's value at a specific point in time — Premiere animates smoothly between two or more.
2. _____ is how a value changes over TIME between keyframes — linear vs. eased.
3. _____ is how a value changes through SPACE between keyframes — a straight line vs. a curved path.
4. _____ / _____ gradually speeds up or slows down motion instead of starting and stopping abruptly.
5. _____ is how transparent or solid a layer is, animatable to create fades or reveals.

Discuss: A classmate's title animates instantly from 0% to 100% opacity with no in-between. What's missing from their keyframe setup?
