

chroma key • luma key • spill • Ultra Key

1. Keying out a specific color (typically green or blue) is called _____ — the standard green screen technique.
2. Keying out a specific brightness value instead of a color is called _____.
3. _____ is Premiere's primary chroma keying effect, with key color, matte, and spill controls.
4. Unwanted color reflecting off a subject from the screen behind them is called _____ — it needs to be suppressed for a clean key.

Discuss: Your subject's hair has a visible green glow even after keying. What Ultra Key control should you adjust first?
