

extract • In point • insert • JKL • lift • Out point • overwrite • playhead

1. The _____ marks the current position in a sequence — where playback starts and where edits are applied.
2. The standard editing shuttle is _____ : J plays backward, K pauses, L plays forward — tap J or L again for double speed.
3. The _____ marks where a clip should start playing; the _____ marks where it should stop.
4. _____ adds a clip at the playhead and pushes everything after it later in time. _____ adds a clip at the playhead by recording over what's already there.
5. _____ removes a clip and leaves a gap behind. _____ removes a clip and closes the gap, shifting everything after it earlier.

Discuss: You need to remove a clip from the middle of a finished sequence and don't want a gap left behind. Which command do you reach for, and why?
