

NAME

DATE

collect files • consolidate and transcode • offline media • Project Manager • verify

1. **Collect Files:** copies only the media a sequence actually uses into a new, self-contained project.
2. **Consolidate & transcode:** converts everything into one standard format.
3. **Verify:** reopen the archive and check for offline media before deleting the original.

An archive nobody's ever tested by actually reopening it isn't an archive, it's an assumption.
