

Paragraph Settings & Area Type

FDD 6.3 · DIGITAL COMMUNICATIONS

NAME

DATE

Alignment

Left, center, right, or justified—justified text can leave awkward gaps in a narrow column, so check it carefully.

Indents

Left, right, and first-line indent—controls how far paragraph text sits from the area type shape's edge.

Space Before / After

Adds vertical breathing room between paragraphs, without needing an extra manual line break.

Hyphenation

Automatically breaks long words at line-ends in justified/narrow columns—can be turned off for a cleaner (if more ragged) edge.

Revision task: open the provided area-type paragraph. It has awkward justification gaps and no space between paragraphs. Fix both using the settings above, then screenshot your before/after.
