NAME _____

DATE _____

Adobe RGB • gamut • out-of-gamut • rich black • sRGB • triangle

The CMYK triangle sits *inside* the RGB ellipse—print can't reproduce every color a screen can display. A color inside the ellipse but outside the triangle is _____.

1. The full range of colors a device or color mode can display or print is called its _____.
2. A color that displays fine on-screen but can't be accurately printed is called _____—Illustrator flags these with a small warning _____ in the Color panel.
3. A deep, dense black made by mixing CMYK inks instead of 100% K alone is called a _____.
4. Two common RGB working spaces for screen work are _____ (the safe web default) and _____ (wider gamut, specialized print-color workflows).

Discuss: Why might a bright neon green logo look great on a website but disappointing once printed on a business card?
