NAME

DATE

Before you open Illustrator, sketch your **chosen** concept (from 2.4's Design Development thumbnails) at final scale in each box below. This is the Implement step. No new ideas today, refine the one you already picked.

Header Logo — wide lockup (mark + site name)

Favicon — mark alone,
square

Favicon check: does the mark still read clearly at a tiny size? Cover the sketch with your thumb from across the room, if you can still tell what shape it is, it passes.

Write the **alt text** you'll enter when you upload each image to Google Sites, one plain sentence describing what the image shows and its purpose, not just its file name:

HEADER LOGO ALT TEXT

FAVICON ALT TEXT
