

NAME _____

DATE _____

**Calligraphic Brush**

Mimics an angled pen nib — the stroke gets thicker or thinner depending on the direction you draw.

**Scatter Brush**

Scatters copies of an object randomly along a path — good for leaves, stars, or texture.

**Art Brush**

Stretches a single piece of art along the entire length of a path — good for ribbons, rope, or a single continuous line texture.

**Bristle Brush**

Simulates a real paintbrush's bristles, including pressure and angle — the most painterly of the five brush types.

**Pattern Brush**

Repeats a set of tiles along a path, with separate artwork for straight sides and corners — good for borders and frames.

**Generate Pattern**

Object > Pattern > Make. Live-tiles your artwork as you adjust tile type, spacing, and overlap, before saving it as a swatch.

A pattern's tile is its repeating unit — watch for the dashed bounding box in Generate Pattern mode to see exactly where one repeat ends and the next begins.
