

Ctrl/Cmd • Outline • Pixel Preview • Presentation Mode • ruler origin

1. **Rulers** (_____ + R) run along the top and left of the document window. Drag from the corner where they meet to move the _____ (the 0,0 point): on the drawing below, the Header Logo's top-left corner.
2. **Guides** are non-printing lines you drag out of a ruler. **Smart Guides** (⌘U) pop up temporary alignment hints as you drag objects near each other.
3. The **Grid** (View > Show Grid) tiles the window with evenly spaced lines; its spacing is set in Preferences > Guides & Grid. **Snap to Grid** makes objects jump to the nearest line.
4. View modes change how artwork is *displayed*, not how it's built: _____ shows only wireframe paths (find a hidden object); _____ previews the vector art on a screen's pixel grid; _____ is a fullscreen, no-interface slideshow of your artboards for a client.

YOUR S2 LOGO PROJECT SETUP

Then, with the Artboard tool (Shift + O)

1. Artboard 1 → **1080 × 192 px**, "Header Logo" (5.625 : 1)
2. Artboard 2 → **192 × 192 px**, "Favicon" (4 × 48)
3. Rearrange All Artboards: **by Column**, **48 px** apart
4. Different sizes from 2.3? Retype W × H in Properties.

YOUR WORKSPACE, DRAWN TO SCALE

Every square is 24 px, and the header and favicon share one 144 × 144 px live area for the mark, so the same mark fits both. **Sketch your strongest thumbnail in both mark zones, then add your site name in the type zone.**

Discuss: Your artboard has three overlapping shapes and you can't click the one on the bottom. Which view mode could help you find and select it, and why?
