

ADD 4.2 | Guided Notes: Shot Analysis & Camera Technique

NAME _____

aperture • dolly • Dutch angle • high angle • low angle • pan • shutter angle • tilt

1. A _____ moves the camera left-right on its tripod head; a _____ moves it up-down.
2. A _____ moves the whole camera forward or back, repositioning it (not just rotating it).
3. A _____ is positioned below the subject and looks up, often making them seem powerful. A _____ is positioned above and looks down.
4. A _____ tilts the camera at a dramatic angle to add tension to a scene.
5. The _____ controls how much light enters the camera — a lower f-number lets in more light.
6. The _____ is the relationship between shutter speed and frame rate — 180° paired with 24fps is the standard cinema look.

Discuss: You shoot the exact same conversation from a high angle vs. a low angle. What changes about how the audience feels toward each character?
