

color correction • color grading • Lumetri • LUT • white balance

1. _____ ensures colors (especially white) render accurately under the current light source.
2. _____ adjusts recorded footage to shift colors back to an accurate, neutral baseline — fixing a problem.
3. _____ adjusts already-corrected footage to create an intentional look and mood — a creative choice.
4. _____ is Premiere's built-in color tool, with Basic Correction, Creative, and Color Wheels panels.
5. A _____ remaps a shot's colors to a specific look — a fast starting point, usually refined further by hand.

Discuss: A classmate skips straight to grading without correcting first. What problem are they likely to run into?
